

Cricket has changed dramatically within the last generation. The speed of the game has increased with the One Day game and also Twenty20. The demands being placed on WicketKeepers (aka KPRs) to perform are becoming greater all the time. Keepers are putting extra pressure on batsmen by standing up to the wickets for quicker bowlers. They're now expected to take extra risks for their team.

The **aero KPR Leg Protector** is designed specifically for WicketKeepers who wish to perform at their very best.

A big part of 'keeping' is moving quickly and confidently to where the ball is arriving. The quicker a team's keeper can get up to the stumps, the better for his team.

aero KPR Leg Protectors are amazingly light. The feeling of lightness on your feet translates into being faster and more agile behind the stumps.

aero's revolutionary 3D shaping allows exceptional freedom of movement. It creates a snug fit that stays in place without tight restricting straps. 3D delivers superior protection and unparalleled comfort when diving, stopping and tumbling.

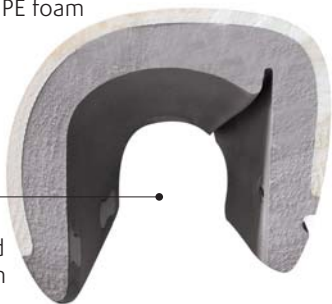

This 3D body-fitting shape with elastic straps and light weight foam construction means **you'll soon forget you're wearing any leg protection at all!**

Move Better **KPR** Keep Better

BETTER PROTECTION

- Dual High Density closed cell PE foam construction... **designed to withstand ball speeds from the fastest bowlers and the strongest throwers.**
- 3D shaping encloses the inside of both knees guarding against inside edges and deflections
- Multiple foam densities afford unparalleled shock absorption

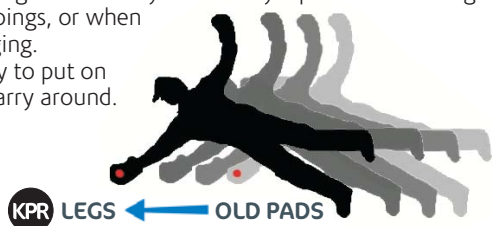

BETTER COMFORT

- 50% lighter than old style Keeping pads.
- 3D anatomical shaping
- 2 fully adjustable elastic straps
- Snug fit...but still with room for the muscles to move and the blood to flow.
- Takes up less space in your gear bag, packs tidily away and is lighter to carry

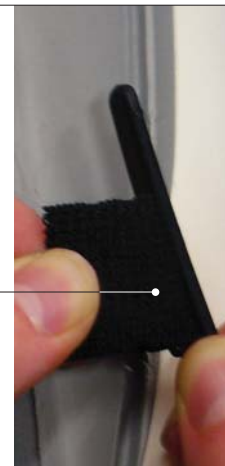

BETTER SPEED

- Superb 3D anatomically-moulded design allows for natural lateral movement that dramatically increases mobility. You'll be 9% faster to the ball and quicker when turning and throwing down the stumps.
- **KPR Legs** don't get in the way like old style pads when taking catches, stumpings, or when diving or sledging.
- Quick and easy to put on take off and carry around.

BETTER DURABILITY

- High quality closed cell PE foam is simple and easy to wash and dry
- Foam cell structure maintains its integrity against repeated ball impacts
- Hot compression foam moulding technology gives unparalleled stiffness and durability of shape
- Adjustable elastic straps can be lengthened and replaced if and when required.
