

Most cricketers don't use chest protection because they don't stay in place, are heavy or bulky in shape, too tight or too stiff...will become hot, are uncomfortable and counterproductive to wear. Old style chest guards are seen only to be used by those fearful, skinny, unskilled batsmen who can't handle aggressive cricket or for the professional players who play against and train under the toughest of circumstances. It's for those reasons that old style chest guards have only been used by a handful of today's cricketers and more often than not end up in the bottom of their gear bags...unworn. However, everybody trains and even today's youth play on bouncy artificial wickets. With bowling machines, it is now possible and probable that school and club players will simulate and practice short pitch bowling at higher speeds to hone their skills. **Accordingly, chest protection has become an increasingly important part of performance gear for the game and the practice sessions of all keen cricketers.** The design of the **aero Chest Protector** features many new key performance elements that afford **better protection, better comfort and better mobility** for all batsmen in a unique and balanced way.

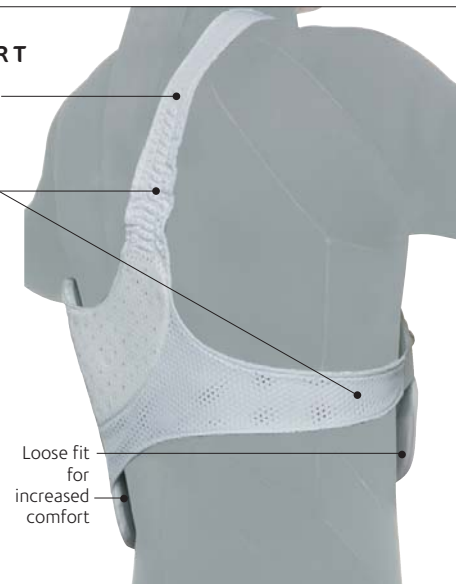

BETTER PROTECTION

- Three layers of high quality closed-cell EVA foam gives superb shock resistance (P1)
- The thickest foam layers cover the high impact areas of the heart and rib cage
- Multiple body sizings for all cricket players (XS, S, M, L)
- P1 for ball speeds up to 160kph
- P3 for ball speeds up to 110kph

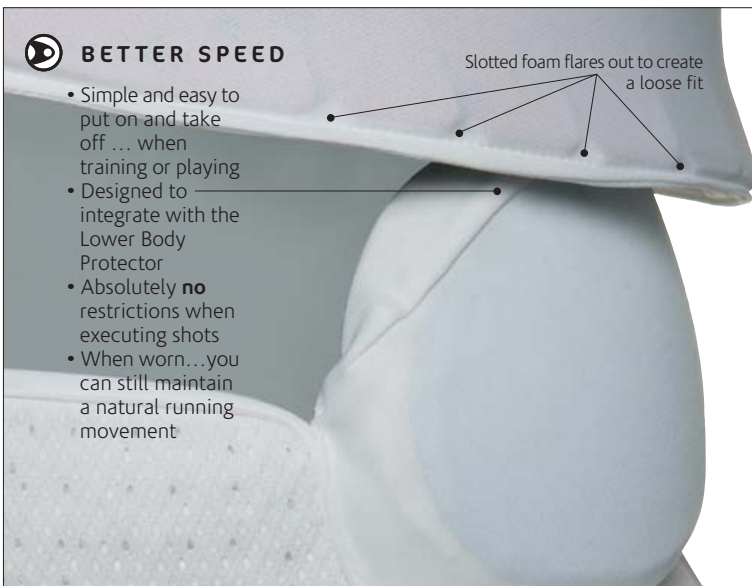

BETTER COMFORT

- Innovative holster design and loose fit, stays exactly in place during use
- Adjustable elastic straps allows chest protector use over a track suit while training
- The antibacterial/washable material facilitates wearing against the skin
- Multiple crease lines and perforations ensures the chest protector moves with you
- Extremely light weight
- The slimline profile fits easily and comfortably under a baggy shirt

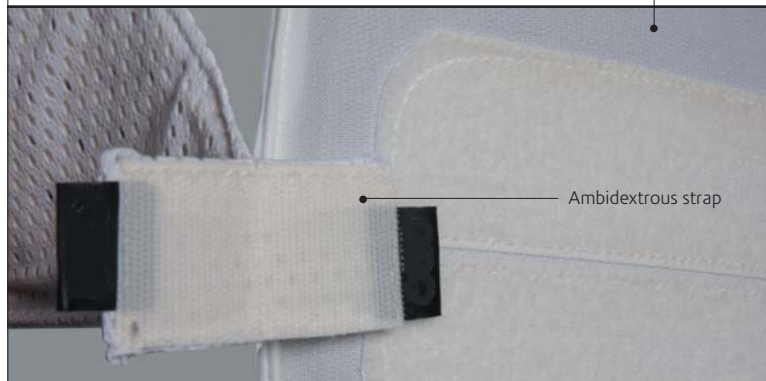

BETTER SPEED

- Simple and easy to put on and take off... when training or playing
- Designed to integrate with the Lower Body Protector
- Absolutely **no** restrictions when executing shots
- When worn...you can still maintain a natural running movement

BETTER DURABILITY

- High quality closed-cell EVA foam ensures cell structure integrity
- Easy to wash and dry...which safeguards against the evil smell or mould build-up from infrequent use or off-season storage.
- Unique antibacterial mesh (material) safeguards against any mould build-up
